May 4, 2026

Updates - wire swaps

- ▶ Last week, I showed that some wires may have been swapped looking at the residual LR distributions
- ▶ Identified swaps : L21W18 and L21W19

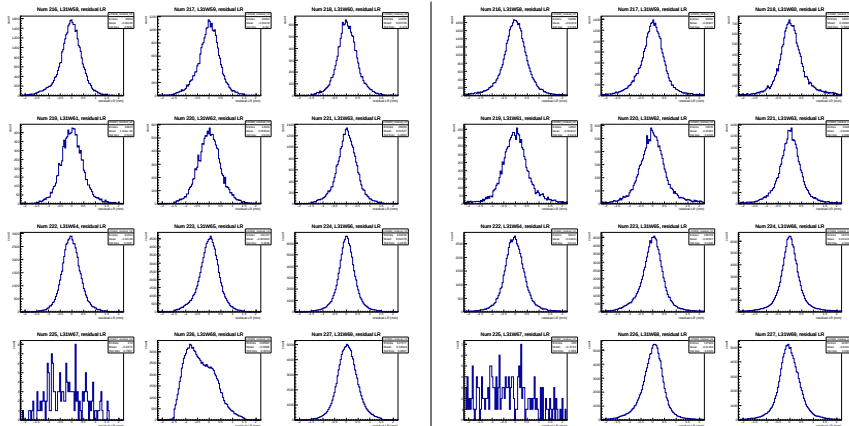

- Identified swaps : L22W20 and L22W22
- Here L22W29 is not swapped (fixed but explained in slide 6 7)

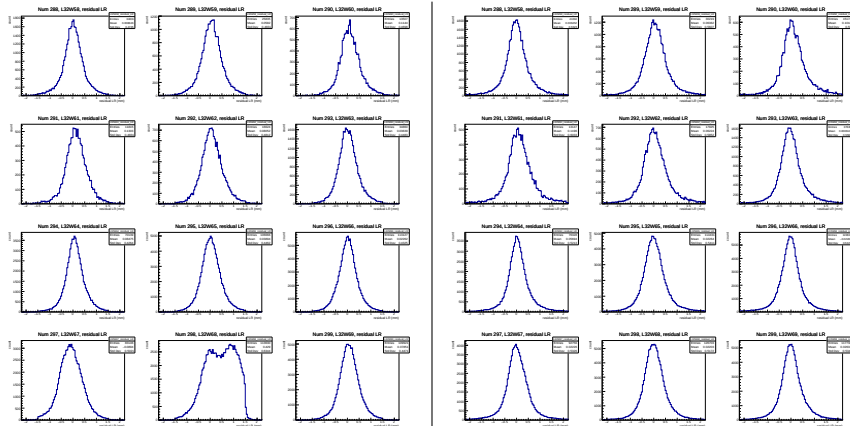

Updates - wire swaps

- Identified swaps : L31W68 and L32W68
- Here L31W67 is off

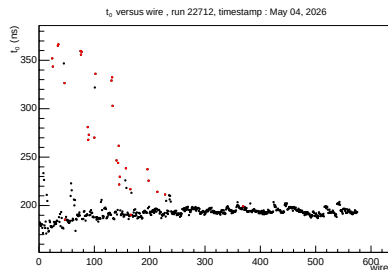

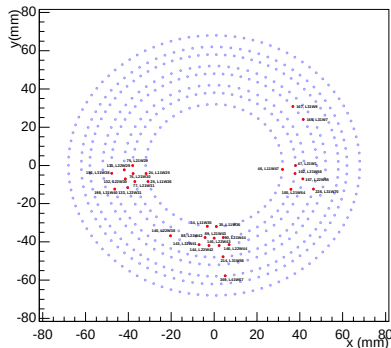

Updates - wire swaps

- Identified swaps : L31W68 and L32W68
- Here L31W67 is off

- Correlation between some bad wire distributions and the t_0 (filled red circles)
- Action: for the identified bad wires, I changed set the t_0 to the mean value of the others distributions

Updates - wire swaps

- ▶ Bad wires before (left) and after (right) t_0 correction
- ▶ As some distributions have been fixed, the number of possible swaps is reduced
- ▶ Examples:
